

CARE COORDINATION

Meridian Access & Referrals

From intake to the next human decision, without the gaps.

Tracks referral completeness, ownership, contact attempts, waitlist status and appointment offers in one visible worklist, with clinical priority always set by a person.

THE PROBLEM

Referrals arrive incomplete and stall silently.

Contact attempts aren't recorded consistently.

Waitlists hide who is waiting and why.

WHAT IT DOES

Referral intake

Reference, service, type, source, owner and summary.

Information gaps

Missing items tracked until resolved.

Stage filters

Received, incomplete, ready, accepted, waitlisted, booked, closed.

Human priority

Priority recorded by an authorised person, never a model.

Contact history

Attempts, outcomes and next contact due.

Offer tracking

Appointment offers and outcomes recorded.

HOW IT WORKS

CONTROL BUILT IN

- ✓ No model sets clinical priority
- ✓ Named reviewer per referral
- ✓ Every contact attributed
- ✓ No live booking claimed

Runs on the Reimea control layer

Every Reimea product shares one control layer, so a new agent arrives already governed. Deployed in your own cloud environment, under your keys.

WHO IT IS FOR

Referral management, single point of access and booking teams across community and urgent care.

MEASURE THE PILOT

Baselines and targets are agreed with you in the Reimea pilot scorecard before the pilot starts.

Current status. Local product demonstrator in Meridian v25 using synthetic data. Live integrations and clinical-safety evidence are scoped with each customer.

WORKS WELL WITH

**Start with one workflow.
Make the decision measurable.**

A 45-minute briefing covers your workflow, the product and its limits, and a sensible next step. Bring the people who own the decision.
