

CLINICAL EDITION

# Meridian Risk Guardian

## Selected evidence. Transparent review signals.

Brings deliberately selected conversations and record context together for a human-reviewed signal assessment, using transparent rules and optional model observations, with a person deciding what any signal means.

### THE PROBLEM

Risk indicators are spread across calls, apps and records.

Black-box scores can't be challenged or explained.

Evidence is imported wholesale without purpose.

### WHAT IT DOES

#### Deliberate sources

Choose each call, session or record explicitly.

#### Identity check

Verify the record and permitted purpose first.

#### Editable evidence

Inspect and remove irrelevant inputs.

#### Transparent rules

Configured phrases and weights, fully inspectable.

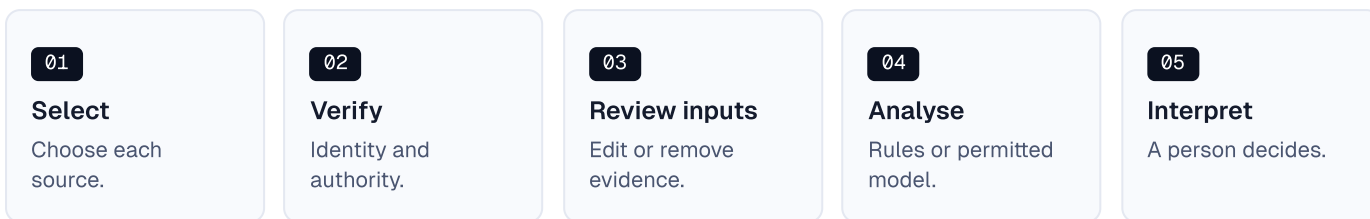

#### Optional semantics

Model observations only when enabled and permitted.

#### Review record

Reviewer note and status.

## HOW IT WORKS

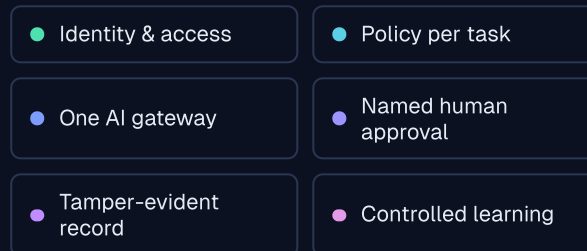

## CONTROL BUILT IN

- ✓ No automated care decisions
- ✓ Authorisation confirmed per review
- ✓ Rules visible and editable
- ✓ Raw audio never imported

### Runs on the Reimea control layer

Every Reimea product shares one control layer, so a new agent arrives already governed. Deployed in your own cloud environment, under your keys.

## WHO IT IS FOR

Clinical safety, safeguarding and senior clinical reviewers evaluating structured risk review.

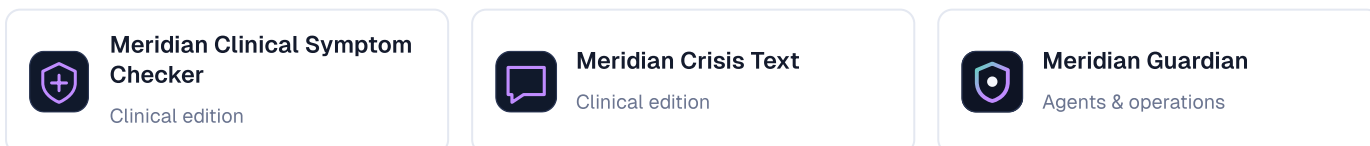

## MEASURE THE PILOT

Baselines and targets are agreed with you in the Reimea pilot scorecard before the pilot starts.

**Current status.** Clinical demonstrator using synthetic data. Not approved for clinical use; live use needs its own intended purpose, DCB0129/0160 safety case and release evidence.

## WORKS WELL WITH

**Start with one workflow.  
Make the decision measurable.**

A 45-minute briefing covers your workflow, the product and its limits, and a sensible next step. Bring the people who own the decision.
